Imagesizer 3.0: <http://www.redim.de/downloads/joomla/plugins/imagesizer-free/>

Description

Imagesizer install

Go to the ImageSizer download link appropriate for your version and download the plugin. Then you find a .zip file in your download folder. Go to the administrator area of your Joomla website and go to the tab "Extensions". From here you can select and upload the imagesizer .zip file. If everything is working properly, you will find the plugin now under the tab "Extensions" -> "Plugins".

Imagesizer functions

The ImageSizer is activated when you scale a picture from a original size. This happens either when you manually set the height or width or when you drag the image smaller by clicking on a corner of an image.

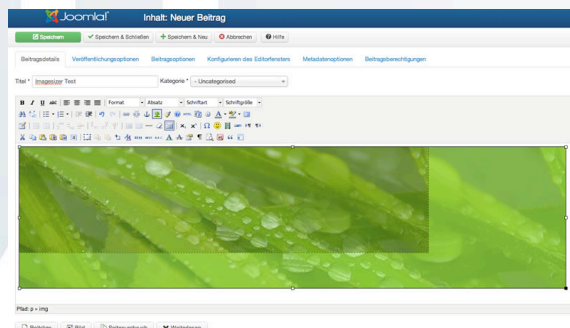

Imagesizer settings

Although all the important settings are pre-set for the ImageSizer already, but there is still the possibility to set adapted options. Go to the tab "Extensions" -> "Plugins" -> "ImageSizer" and you get to the options.

Basic options

Lightbox-Script: Here you can choose a suitable lightbox for your website. The ImageSizer gives you a great selection of lightboxes. Just select a lightbox and save the settings. Then your image appears in the selected lightbox. We installed several lightboxes in the ImageSizer, because it may happen that some Lightboxes unable to tolerate certain templates or other lightbox plugins.

minimal width/height (thumb): This setting only works in conjunction with the insert and resize settings, which is below, and must be set to YES. The pictures in the content will be automatically reduced to 120x120 size. NOTE: The images are not simply scaled rectangular, but shown undistorted. Vertical

| Details | Basis-Optionen | Experten-Optionen | Informati |
|---------------------------|----------------|-------------------|-----------|
| Lightbox-Script | slimbox.php | | |
| Minimale Breite (Thumb) | 120 | | |
| Minimale Höhe (Thumb) | 120 | | |
| Maximale Breite (Bild) | 800 | | |
| Maximale Höhe (Bild) | 800 | | |
| JPG Qualität (%) | 85 | | |
| Weiterlesen-Link-Funktion | Nein | | |
| Einfügen und skalieren | Ja | | |
| Update prüfen | Nein | | |

and horizontal images are each scaled with width or height to 120 pixels.

maximum width/height (image): This setting set the maximum size for the images in the lightbox. If a rectangular image is opened, in this example the lightbox open in a 800x800 size. IMPORTANT: If the picture is vertical or horizontal too, the image will be not distorted, but scaled with only one value, width or height of 800 pixels.

Read-More-Function (only for ImageSizer 3.0): When you click a picture over a "read more" function in the content, it will be first show you the content behind the „read more“, before open the lightbox. Only when the entire content is displayed, the image can be opened in a lightbox.

Information and tips

Under the information tab you can find tips and useful additional parameters which can be used in conjunction with the ImageSizer.

Multi-Image-Insert - To insert multiple images from a folder in the same content, you have to insert the command {path = "folder name"}. After saving, all photos in this folder will appear in the selected content.

Multi-Image-Insert (limited) - To insert only a certain number of images from a folder in the same content, you have to use the command {"Folder Name" limit = "number" ImageSizer path =}. After saving, only the selected number of images will be appear in the content page.

Additional-Parameters for images:
